MEZOTERAPIJA | MESOTHERAPY

Mezoterapija je minimalno invazivna procedura koja se danas primjenjuje za različita medicinska stanja i estetske tretmane. Injiciranjem koktela (hijaluronska kiselina, aminokiseline, vitamini, minerali, faktori rasta) vrlo tankom iglom, postiže se dopremanje najučinkovitijih revitalizirajućih sastojaka u odabrana područja kože. Potaknuti procesi duboke regeneracije, revitalizacije i hidratacije kože rezultiraju mladolikom, zategnutom i sjajnjom kožom.

Mesotherapy is a minimally invasive procedure used for different medical conditions and aesthetic treatments. By injecting a cocktail (hyaluronic acid, amino acids, vitamins, minerals, growth factors) with a very thin needle, the delivery of the most effective revitalizing ingredients to selected areas of the skin is achieved. Stimulated processes of deep regeneration, revitalization and hydration of the skin result in youthful, taut and radiant skin.
